INTERESTS & HIGHLIGHTS:

I am an Assistant Professor at the College of Information Studies, University of Maryland, and Associate at Cornell Tech's Digital Life Initiative (DLI). I study the race between technology and policy, focusing on the politics & structure of policy design, and the discretion of public and private actors in policy enforcement & compliance. I apply 'civic technologies' to understand policy implementation in central socio-technical systems that mediate values such as security, privacy, identity, and accountability. In my PhD, I applied institutional theory to understand cybersecurity and privacy policies across nations, sectors, and contexts. I explain the puzzle of how sticky, resistant to change policy institutions come together and interact with the rapid institutionalization of technology in society. I study structure, process, ideas, and compliance practices across these institutional environments, using theory-testing and case-centric process-tracing analyses, text analysis, fuzzy set qualitative comparative analysis (fsQCA), regression analysis, and social network analysis (SNA) to reach my conclusions.

I hold a background in computer and social sciences, with eight years of experience in leading technical cybersecurity positions from the private sector, Israel's Prime Minister's Office, and the Israeli Air-Force [Captain]. I was previously a postdoctoral fellow at Cornell Tech's Digital Life Initiative (DLI), MA Fulbright Scholar at the University of Minnesota, and U.S. Congress Research Fellow in Washington DC. I had completed my BA with honors in Computer Science at the Technion – Israel's Institute of Technology.

I teach about theories at the intersection of governance, data, privacy, and cybersecurity. I created an experiential learning class on information risk management, teach on the foundations of cybersecurity, ethics & privacy, and policy design & compliance with social harms from technology.
